Automated Prior Authorization Report

Patient Record

Patient Name : David Miller
Age : 67
Gender : Male
Diagnosis : Chronic Kidney Disease
Medication : Jardiance
Provider : Dr. James Lee

Clinical Notes

Patient diagnosed with Chronic Kidney Disease Stage 3. eGFR continues to decline.

Lab Reports

eGFR : 42

Previous Prior Authorization

Jardiance - Pending

Clinical Summary

Based on the patient record, I extracted the following information:

* Diagnosis: Chronic Kidney Disease (Stage 3)
* Symptoms: Not explicitly mentioned in the clinical notes
* Previous medications documented in the clinical notes:
+ Jardiance
* Treatments that clinically failed: None explicitly mentioned

Policy Evaluation

Policy: SGLT2 Inhibitor Prior Authorization
Description: Coverage for SGLT2 inhibitors in chronic kidney disease
Status: Eligible

Insurance Decision

Company: MediClaim Health Insurance
Decision: Approved
Date: 2026-06-29

Here is my response:

Medical Necessity:

The requested SGLT2 inhibitor treatment is clinically appropriate for this patient with Chronic Kidney Disease (Stage 3). The patient's eGFR level of 42, as evaluated by the insurance policy rules, indicates that they meet the criteria for coverage. Additionally, the patient's age of 67 does not exceed the expected age limit of 18 specified in the policy rules. Given the patient's diagnosis and clinical summary, this treatment is a reasonable option to manage their chronic kidney disease.

Policy Justification:
The patient satisfies the insurance policy as they meet both criteria evaluated by the rule evaluation: eGFR (42) and Age (67). The patient's age does not exceed the expected age limit of 18 specified in the policy rules, and their eGFR level is below the expected threshold of 60. Therefore, the patient meets the requirements for coverage under the insurance policy.
